#### HYPOTRICHOSIS ( HrF )

Yanta takes its responsibilities as a producer of seed stock genetics for the prime lamb industry seriously. Not only do we need to provide the industry with genetics that improve profit driving traits such as growth, efficiency, yield, muscling and fertility, we have a responsibility to ensure genetic conditions that could have a negative effect on productivity are identified, managed and eliminated. When Hypotrichosis (HrF) was identified as an issue in White Suffolk's (and other breeds), Yanta took the step of DNA testing our Top 10 White Suffolk stud rams every year. Because HrF is recognised as a simple autosomal recessive trait, meaning that both parents must carry the gene for it to be expressed in the progeny, using DNA tested HrF free Yanta rams means the problem will not appear in their progeny in your flock, even if HrF is present. Those 10 rams we tested their results appear in the catalogue.
